Lesson Objectives

- Working with jQuery Plugins

Instructor Notes:

Add instructor notes here.

4.1: Bootstrap Plugins

Bootstrap jQuery Plugins

- Bootstrap comes bundled with 12 jQuery plugins that extend the features and can add more interaction to your site.
- Plugins can be included individually (using Bootstrap's individual *.js files) or all at once (using bootstrap.js or the minified bootstrap.min.js).
- Both bootstrap.js and bootstrap.min.js contain all plugins in a single file.
- We can use all Bootstrap plugins either through the markup API using data-* attributes without writing a single line of JavaScript or purely through the JavaScript API.
- To disable data attribute API and access plug-ins through JavaScript API.
 - Disable all plugins : `$(document).off('.data-api')`
 - Disable a specific plugin: `$(document).off('.alert.data-api')`

Mobile first approach uses the grid system in particular is to layout designs first on small screens, such as those that come on a mobile phone and then it can be scaled up the size of those designs to larger and larger environments.

Prior to Bootstrap 3 It doesn't support mobile first approach and as a optional feature it supports Responsive web design.

Instructor Notes:

Add instructor notes here.

4.1: Bootstrap Plugins

Working with Methods

- **All JavaScript API methods can accept an optional options object, a string which targets a particular method, or nothing (which initiates plugin with default behavior)**
- **To initialized with defaults**
 - `$(selector).ApiMethod()`
- **To initialized with Options**
 - `$(selector).ApiMethod({options})`
- **To initialized with methods to be invoked**
 - `$(selector).ApiMethod('methodName')`

Mobile first approach uses the grid system in particular is to layout designs first on small screens, such as those that come on a mobile phone and then it can be scaled up the size of those designs to larger and larger environments.

Prior to Bootstrap 3 It doesn't support mobile first approach and as a optional feature it supports Responsive web design.

Instructor Notes:

Add instructor notes here.

4.1: Bootstrap Plugins

Working with Events

- Bootstrap provides custom events for most plugins' unique actions.
- All Bootstrap events are namespaced i.e. `<event>.bs.<component>`
 - eg: `show.bs.modal`
- If (show) is triggered at the start of an event, its past participle form (shown) is triggered on the completion of an action.

4.1: Bootstrap Plug-ins

Transition Plug-in

- **Transition plugin provides simple transition effects.**
- **We can apply transitions on Modal, Tab, Alerts and Carousel plugins**
- **These are the classes for the different transitions:**
 - .fade (fade out)
 - .fade.in (fade in)
 - .collapse (collapse out)
 - .collapse.in (collapse in)
- **If you use the modal then the fade class adds animation to the modal**
 - .fade (fade out to top 0)
 - .fade.in (fade in from top to 50% height)

4.1: Bootstrap Plug-ins

Modal Plug-in

- A Modal dialog is a dialog that overlays the rest of the web page and take the control of page.
- A modal is a child window that is layered over its parent window.
- To invoke the modal window, we can use a button or a link with data-toggle="modal" along with a data-target="#identifier" or href="#identifier" to target a specific modal
- There are 3 distinct parts inside a Modal: header, body and footer
- To include this plugin functionality individually we need to use modal.js

4.1: Bootstrap Plug-ins

Modal Plug-in options

| Options | Default Value | Data attribute | Description |
|----------|--------------------------------|----------------|--|
| backdrop | boolean or the string 'static' | data-backdrop | specify static for a backdrop, if you don't want the modal to be closed when the user clicks outside of the modal. |
| | Default: true | | |
| keyboard | boolean | data-keyboard | Closes the modal when escape key is pressed; set to false to disable. |
| | Default: true | | |
| show | boolean | data-show | Shows the modal when initialized. |
| | Default: true | | |
| remote | path | data-remote | Using the jQuery .load method, inject content into the modal body. If an href with a valid URL is added, it will load that content. An example of this is shown below: |
| | Default: false | | <code><a data-toggle="modal" href="remote.html" data-target="#modal">Click me</code> |

4.1: Bootstrap Plug-ins

Modal Plug-in methods

| Method | Description | Example |
|-------------------------------|--|---|
| <code>.modal(options)</code> | Activates your content as a modal. Accepts an optional options object. | <code>\$('#identifier').modal({ keyboard: false })</code> |
| <code>.modal('toggle')</code> | Manually toggles a modal | <code>\$('#identifier').modal('toggle')</code> |
| <code>.modal('show')</code> | Manually opens a modal | <code>\$('#identifier').modal('show')</code> |
| <code>.modal('hide')</code> | Manually hides a modal | <code>\$('#identifier').modal('hide')</code> |

4.1: Bootstrap Plug-ins

Modal Plug-in Events

| Event | Description | Example |
|-----------------|---|--|
| show.bs.modal | Fired after the show method is called. | <pre>\$('#identifier').on('show.bs.modal', function () { // do something... })</pre> |
| shown.bs.modal | Fired when the modal has been made visible to the user (will wait for CSS transitions to complete). | <pre>\$('#identifier').on('shown.bs.modal', function () { // do something... })</pre> |
| hide.bs.modal | Fired when the hide instance method has been called. | <pre>\$('#identifier').on('hide.bs.modal', function () { // do something... })</pre> |
| hidden.bs.modal | Fired when the modal has finished being hidden from the user. | <pre>\$('#identifier').on('hidden.bs.modal', function () { // do something... })</pre> |

Mobile first approach uses the grid system in particular is to layout designs first on small screens, such as those that come on a mobile phone and then it can be scaled up the size of those designs to larger and larger environments.

4.1: Bootstrap Plug-ins

Carousel Plug-in

- A Carousel gives you a picture Carousel that can cycle through a series of images.
- Carousel works best when all of the images have the same resolution
- Carousel can also have a caption inside of each item that typically consists of some header text and some additional text
- We can set the interval to how frequently to swap the pictures
- We can also control the carousel using user pause, previous and next buttons.
- To include this plugin functionality individually we need carousel.js

4.1: Bootstrap Plug-ins

Carousel Plug-in options

| Option Name | Default Value | Data attribute | Description |
|-------------|------------------|----------------|---|
| interval | number | data-interval | The amount of time to delay between automatically cycling an item. If false, carousel will not automatically cycle. |
| | Default: 5000 | | |
| pause | string | data-pause | Pauses the cycling of the carousel on mouseenter and resumes the cycling of the carousel on mouseleave. |
| | Default: "hover" | | |
| wrap | boolean | data-wrap | Whether the carousel should cycle continuously or have hard stops. |
| | Default: true | | |

4.1: Bootstrap Plug-ins

Collapse Plug-in

- **Collapse plugin makes it easy to make collapsing divisions of the page.**
- **It is used to create collapsible groups or accordion**
 - **data-toggle="collapse"** is added to the link on which we click to expand or collapse the component.
 - **href** or a **data-target attribute** is added to the parent component, whose value is id of the child component.
 - **data-parent** attribute is added to is added for creating accordion like effect.
 - **.collapse** class is used to hide the content and **.collapse.in** class is used to show the content
- **To include this plugin functionality individually we need to use collapse.js**

4.1: Bootstrap Plug-ins

CollapsePlug-in options

| Option | Default Value | Data attribute | Description |
|--------|----------------|----------------|--|
| parent | selector | | If selector then all collapsible elements under the specified parent will be closed when this collapsible item is shown. (similar to traditional accordion behavior - this dependent on the accordion-group class) |
| | Default: false | | |
| toggle | boolean | data-toggle | Toggles the collapsible element on invocation. |
| | Default: true | | |

Tab Plug-in

- Tabs are used to arrange a navigational menu with links to other pages or sections of the site.
- Using Tab plugin, we can transition through panes of local content in tabs or pills
- Adding the `.nav` and `.nav-tabs` classes to the tab ul will apply the Bootstrap tab styling, while adding the `.nav` and `.nav-pills` classes will apply pill styling.
- `.tab()` method activates a tab element and content container. Tab should have either a `data-target` or an `href` targeting a container node in the DOM.
- To include this plugin functionality individually we need `tab.js`
